link I have made a mediafire link for all my posts and manuals in w/c I made tutorials in all my tutorials I will link all my posts and manuals on my guide for you to get it fixed by daz Mediafire link for my daz videos & tutorials You have to extract the contents of this zip file into the "part5" folder which is located in your Steamsteamapps\common. A. To start the install you will need to have the 'daz v1.9.2' mediafire link - click here, it's available for free If you haven't downloaded it yet you can do that now, once the daz v1.9.2 mediafire link is available. If you don't have daz v1.9.2 you can download it by clicking here (no free version) B. Open your steam library, in there go to: c:\program files (x86)\steam\steamapps\common C. Once inside the folder you will see several folders, go into part5, the one you downloaded in step A. D. Inside of that folder is the 'daz v1.9.2.rar' file - Extract this file into your part5 directory. E. Once the extraction is complete you should be ready to install. You can follow the rest of the instructions from part 4, but everything you need to know is now in step D so you can skip everything else and follow the install instructions.Q- CoreData Save I have seen many similar questions, but I have tried to implement all answers without success. NSManagedObjectContext \*context = [self managedObjectContext]; NSManagedObjectContext \*managedObject = [NSEntityDescription insertNewObjectForEntityForName:@"Sections" 82157476af
